SKILLS

- Frontend Development: React JS, Next JS, Material UI, JavaScript, TypeScript, CSS, Tailwind CSS.
- Shopify Development: Design And Product Upload.
- Backend Development: Node JS, Express JS, Nest JS, JWT Authentication, Crypto JS Authentication, WebSockets, Webhooks.
- Microservices Architecture: Kafka, RabbitMQ, TCP, Grafana, Prometheus.
- Cloud Management: AWS, GCP (Google Cloud Platform).
- DevOps & CI/CD: Docker, GitHub Pipeline, Shell Scripts.
- Database Management: MongoDB, MySQL.
- Project Management: Agile, Scrum, Jira, Confluence

PERSONAL

- Date of Birth: November 16, 1997
- Marital Status: Single
- Nationality: Indian
- Current Location: Dubai, UAE
- Visa Status: Employment Visa
- Overall Experience: 7+ Years (2018-Present)
- Notice Period: 1 Month (Negotiable)
- Languages: English, Hindi, Tamil, Malayalam, Kannada

WORK HISTORY

SoftBuilders (2024 – Present) -Backend Developer

Quickdropx (Dropshipping – Ongoing Project)

- QuickDropX is a multi-tenant SaaS platform that combines dropshipping automation (import & resell products across eBay, Shopify, Amazon via supplier integrations) with a native marketplace where sellers can list their own products, manage inventory and shipping, and buyers can browse, cart, and checkout
- Built the full Stripe subscription system – payment intents, plan upgrades with mid-cycle proration, trial periods, coupon handling, and webhooks
- Owned the add-on module end-to-end: purchase flow, auto-renewal, invoice generation, and payment history
- Fixed a race condition that let concurrent requests exceed team seat limits, and patched a cross-tenant write vulnerability in the product import pipeline
- Built marketplace promotion system with atomic slot claiming to prevent vendors from overselling promotion slots
- Shipped a third-party product import pipeline with per-row error reporting and duplicate prevention
- Enforced permission-based access across team members – store-level scoping, privilege mapping, and seat limit enforcement
- Designed and shipped mid-cycle subscription proration with Claude – worked through the billing architecture, Stripe mechanism tradeoffs, and edge cases upfront before implementation, then built it cleanly across all three subscription types

SoftBuilders Properties (Real Estate Platform – Built from Scratch)

- Developed a real estate platform allowing users to search for properties based on area, city, popularity, price, and additional filters.
- Built the backend API using NestJS and MongoDB, leveraging Elasticsearch for efficient property searches.
- Designed the application using a microservices architecture, integrating Kafka as the message broker for inter-service communication.
- Deployed the development environment on Google Cloud Platform (GCP), using NGINX as a reverse proxy.
- Configured Docker for containerized deployment of Kafka, Zookeeper, and Kafdrop (Kafka UI).

EDUCATION

Bachelor of Computer Applications: Computer Science.
Srinivas Institute Of Management Studies,
Mangalore, May 2018

TEAM LEADERSHIP & PROJECT MANAGEMENT

- Led the Homnifi-CloudK feature team, And Hashgate Team; coordinating with the project manager, client, and team members to define tasks and requirements.
- Designed and implemented efficient microservices communication architecture for CloudK.
- Managed Agile development using Scrum methodology, conducting sprint planning and tracking progress via Jira.

Homnifi (Crypto Mining Platform)

- Joined an existing project and contributed to the backend for a platform where users can purchase mining machines, generate rewards in tokens, and swap/stake tokens for additional earnings.
- Built and optimized queue-based reward generation using BullMQ for retry mechanisms.
- Implemented Redis for caching and RabbitMQ for queue-based communication and event-driven architecture.
- Developed email and Telegram-based reporting systems for daily performance analysis.
- Led the database migration, transferring 85+ million records to a new structure with optimized scripts.
- Deployed and managed GCP VM instances, setting up RabbitMQ on separate servers and integrating it into the application.
- Configured Grafana and Prometheus for real-time monitoring and performance metrics of microservices.

Hashgate Technologies (2021 – 2024)

Frontend Development

- Developed user interfaces using React.js, Material UI, Redux, React Router, and Next.js.
- Implemented React Query for efficient data fetching and real-time updates.
- Utilized React Hooks (useState, useEffect, useContext) for state and context management.

Backend Development & API Development

- Built REST APIs using Express.js, Node.js, and Mongoose (MongoDB).
- Optimized API performance using MongoDB Profiler and complex queries via MongoDB Aggregation.
- Secured applications with JWT authentication, Crypto encryption, and Rate Limiting for API protection.
- Implemented WebSockets (Socket.IO) for real-time updates.

Deployment & Cloud Services

- Deployed web applications using AWS (Elastic Beanstalk, ECS, EC2, Amplify, EKS, Cognito, Secrets Manager, Cloud Map, SES, Route53, S3, EC2 Snapshots).
- Configured Nginx for reverse proxy and PM2 for process management in production.
- Set up CI/CD pipelines for automated builds and deployments.

Testing & Monitoring

- Designed and executed testing protocols to identify system issues.
- Developed unit test cases using React Jest for frontend testing.
- Implemented API monitoring and documentation using Swagger.
- Configured Grafana & Prometheus for system monitoring and logging.

Version Control & CI/CD

- Maintained source code using Bitbucket and integrated CI/CD pipelines.
- Reviewed code, debugged issues, and optimized application performance.

Hashgate — Project Experience

- **CopoDeals** — Developed and enhanced a gamified e-commerce platform featuring luxury prize-draw ticketing integrated with online purchases.
 - **DrHero** — Built and maintained a telehealth platform with doctor marketplace, secure video consultations, appointment scheduling, and e-prescription functionalities.
 - **Bossini** — Developed and managed the e-commerce platform and admin dashboards for product management, uploads, and online retail operations for Bossini.
-

MuxEmail - Full Stack Web Developer (2019 – 2021)

- For Frontend Development using **React.js, Material UI for React, Redux & React Router.**
 - Rest API Development using **Express, Node.js, Mongoose/MongoDB.**
 - Team Coordination with task estimation and organized development with tools like **Trello, Slack, and scrum poker.**
 - Designed testing protocols to locate issues within the system.
 - Oversaw and implemented automated build and deployment pipelines.
 - Developed unit test cases for testing and automation using **React Jest**
 - Reviewed code, debugged problems, and corrected issues.
 - Improved and designed monitoring systems to address issues with system stability and quality of data.
 - Recorded and maintained API documentation using **Swagger**
 - Used Bit Bucket for maintaining the source code and for CI/CD pipeline.
-

Data Queue System/Q Academia (2018 – 2019)

- Met project deadlines without sacrificing build quality or workplace safety.
- Worked as guide for students final year project with 25 batches.
- The language used are HTML, PHP, MySQL, JavaScript, Bootstrap, CSS, Media Query
